IC-705 Display cover that slides over the knobs and protects the screen. Works with mounts that prevent access to the side.

I tried some other excellent covers, but they required clips that wrapped round the edge of the radio and didn't fit with the wonderfully made [Peovi Carry Cage](#) that I have fitted to my radio.

I designed this to be sturdy but low profile and provide some “pressing” protection to the knobs and buttons on the radio. It doesn't have a retention mechanism at the moment, but that won't affect many use cases

Small enough print to be printed on my Prusa Mini.
